

# Information, Can You Get It Fast Enough?

*Empress Fast Search Functionality*

Empress Software Inc.

# Agenda

---

- Introduction
- Empress API Speed
- Retrieval Speed – Using Indexes

# Agenda

---

- Shiborikomi Search Capability
- Text Search Index Capability
- Instead of Conclusion

# Introduction

---

- How Important is Data Retrieval Speed?

# Empress API's

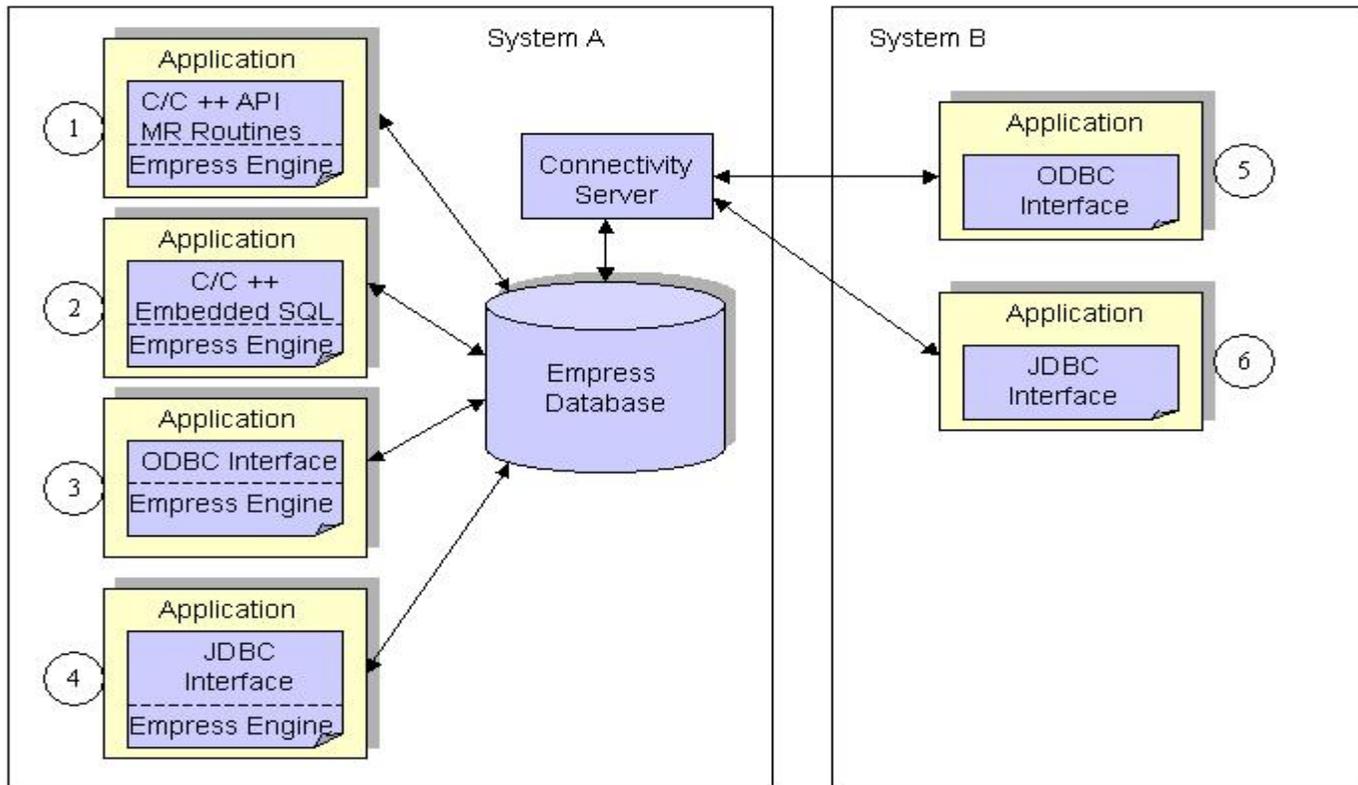

---

*Languages: C, C++, Java, ...*

*Code Sets: Latin-1, Unicode, UTF-8, EUC-JP, SJIS, ...*

- C/C++ Kernel Level Interface - mr Routines
- Embedded Static and Dynamic SQL
- *ODBC Interface*
- *JDBC Interface*

# Empress API's

# Performance Considerations

---

## *Benchmark Scenario for Embedded Printer Database*

- dbCreateSchema - create database printer\_db
- registerPrinterJobs - insert 256 printer jobs
- registerPrinterInfo - insert 256 printer info items
- setPrinterJob - update job id: 134
- getPrinterJob - retrieve printer job info for job 134
- deletePrinterJob – delete printer job 134
- getPrinterInfo - retrieve printer info for job 134
- deletePrinterInfo – delete printer info for job id 134

# Performance Considerations

---

## *Benchmark Scenario for Embedded Printer Database*

- Benchmark performed on the target Intel x86 Celeron 800MHz PC system

API Calls	ULTRA	
	Execution Time (ms)	Dynamic Memory Usage (bytes)
RegisterPrinterJob	11.235	2,236
RegisterPrinterInfo	7.743	2,248
SetPrinterJob	0.316	0
<b>GetPrinterJob</b>	<b>0.132</b>	780
DeletePrinterJob	0.205	0
<b>GetPrinterInfo</b>	<b>0.141</b>	88
DeletePrinterInfo	1.255	0

# Empress Special Searches

---

- *Shiborikomi Search*
- *Spatial Index Search*
- *Text Search Index*

# Empress Shiborikomi Search

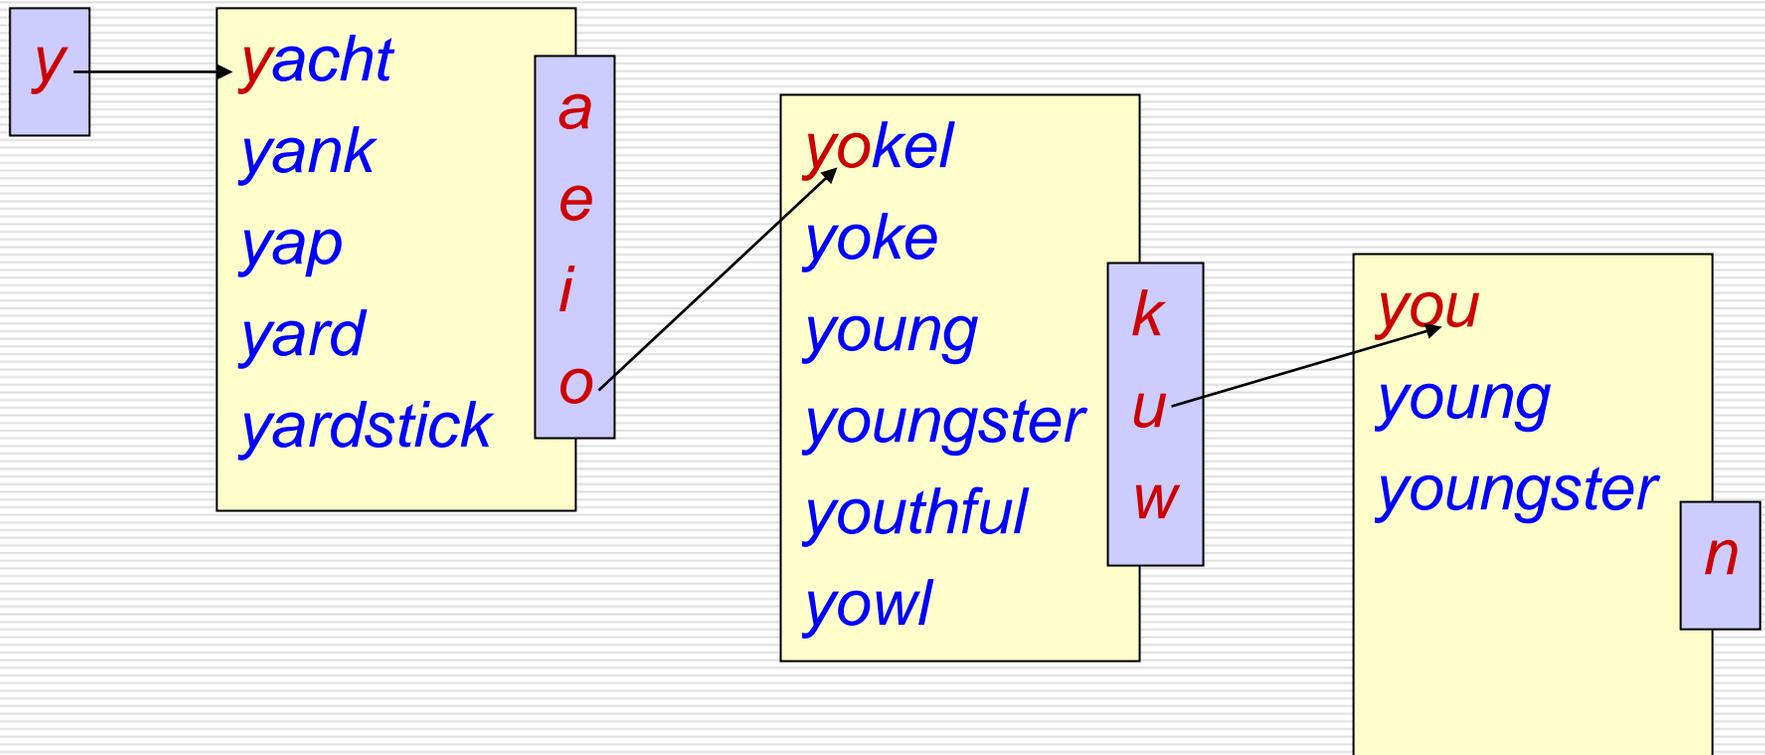

---

- *Additional set of C API calls that should be used in conjunction with Empress C/C++ Kernel Level API – mr Routines.*
- *For Car Navigation, Car Infotainment and Mobile Application Market*
- *Searches a Single Table and a Single Attribute of a Character Based Empress Data Type.*

# Empress Shiborikomi Search

---

*Car Navi & Cell Phone Applications*

# Empress Shiborikomi Search

---

## *Shiborikomi Search API Calls*

- `ms_shiborikomi_search_begin()`
- `ms_shiborikomi_search_end()`
- `ms_shiborikomi_search()`
- `ms_shiborikomi_search_next()`
- `ms_shiborikomi_search_prev()`

# Empress Shiborikomi Search

---

## *Shiborikomi Search Example Excerpt*

```
handle = ms_shiborikomi_search_begin (rec, attr, *argv[4], &count);

if (ptrnil (handle))
    goto done;

printf ("Count=%d\n", count);
for (i = 0; i < count; i++)
{
    if (ms_shiborikomi_search (handle, i + 1) == 1)
    {
        printf ("Record Number=%d\t", mrgetptr (rec));
        printf ("Attr: %s\n", mrgetvs (rec, attr));
    }
    else
        printf ("Error: %s\n", mrerrmsg ());
}
```

# Empress Text Search Index

---

- *Implements an efficient search for database records using keywords/tokens/phrases.*
- *Additional set of C calls that are used in conjunction with Empress C/C++ Kernel Level API – mr Routines.*
- *Application would supply the list (array) of tokens/keywords/phrases on insertion in the Empress database in order to create a text search index.*

# Empress Text Search Index

---

## *Karaoke Machine*

- *For the famous Beatles song “**I Want To Hold Your Hand**” the list of tokens/keywords/phrases could look like as follows:*

*Want*

*Hold*

*Hand*

*I*

*Hold Your*

*Your Hand*

*Hold Your Hand*

# Empress Text Search Index

---

## *Karaoke Machine*

- Search using either token *Mc* or *Mac* to get a song title "*Old Macdonald*".
- Search using token *Hold* to get a song title "*I Want To Hold Your Hand*", the result list may include:

*You Really Got A Hold on Me* (Beatles)

*If We Hold On* (Diana Ross)

*I Want To Hold Your Hand* (Beatles)

*Hold Me Back* (Ac/Dc)

*Hold Me, Thrill Me, Kill Me* (U2)

# Empress Text Search Index

---

## *Karaoke Machine*

*Hold*

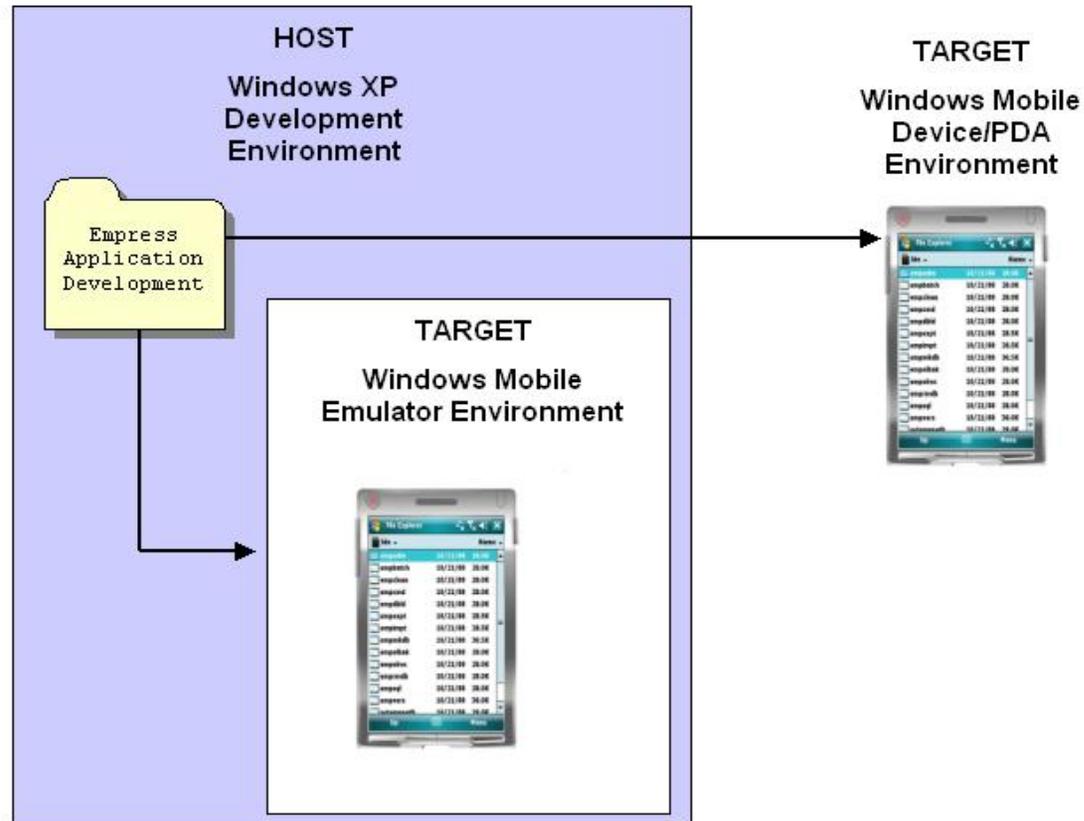

```
graph TD; A[Hold] --> B["You Really Got A Hold on Me<br/>If We Hold On<br/>I Want To Hold Your Hand<br/>Hold Me Back<br/>Hold Me, Thrill Me, Kill Me"]; B --> C["I Want To Hold Your Hand"]
```

*You Really Got A Hold on Me*  
*If We Hold On*  
*I Want To Hold Your Hand*  
*Hold Me Back*  
*Hold Me, Thrill Me, Kill Me*

*I Want To Hold Your Hand*

        |--> rdbms\           Empress loadable libraries  
        |--> nls\             Empress config files (for reference)  
        |--> shlib\           Version of this target package
```

# Empress Text Search Index

---

## *Text Search API Calls*

- `mstsi_create ()`
- `mstsi_drop ()`
- `mstsi_open ()`
- `mstsi_close ()`
- `mstsi_add ()`
- `mstsi_del ()`
- `mstsi_get ()`
- `mstsi_getv ()`
- `mstsi_union_reclist ()`
- `mstsi_intersect_reclist ()`

# Empress Text Search Index

---

## *Text Search Example Excerpt*

```
songs_tabdesc = mropen (DATABASE, L"songs", 'r');

songs_recdesc = mrmkrec (songs_tabdesc);
id_attrdesc = mrngeta (songs_tabdesc, L"id");
title_attrdesc = mrngeta (songs_tabdesc, L"title");

index_handle= mstsi_open (songs_tabdesc , title_attrdesc, 'r');

id_value = mrspv (id_attrdesc);
title_value = mrspv (title_attrdesc);

record_list = mstsi_get (index_handle, L"Hold", 0);
if (record_list == 0)
{
    printf ("No songs with token Hold\n");
    return 0;
}
qual = mrqlst (songs_tabdesc, record_list);

retrieve_desc = mrgetbegin (qual, songs_recdesc, (void*) 0);

while (mrget (retrieve_desc))
```

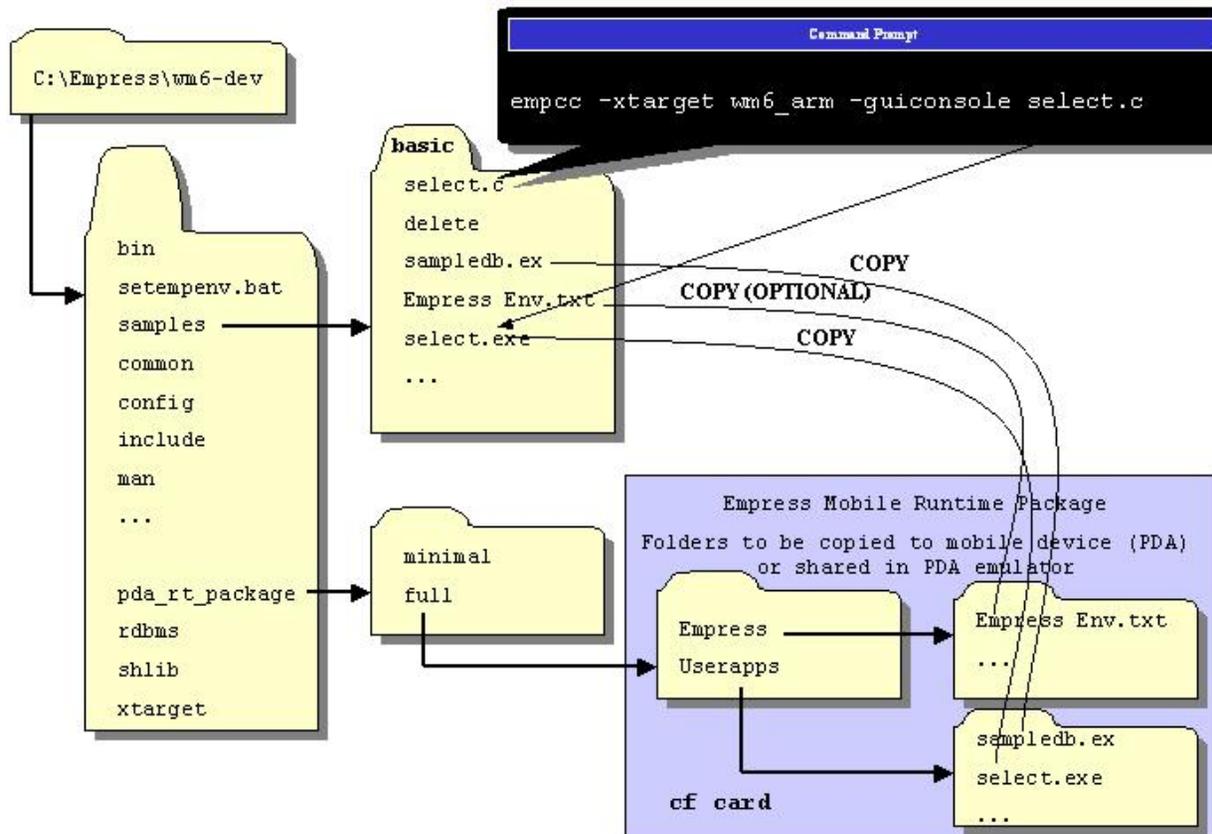

# Empress Text Search Index

---

*Cross-compiling Application with Text Search Capability*

```
empcc -xtarget wm6-arm  
-guiconsole  
-I C:\Empress\wm6-dev\tsi-arm  
application.c  
C:\Empress\wm6-dev\tsi_arm\tsi_search.obj
```

---

*Wikipedia "The Free Encyclopedia" Database*

Windows Mobile 6 Device – HP iPAQ

CPU: PXA310 624MHz, 128MB, CF Card: 32GB

# Empress Text Search Index

---

## *Wikipedia Database*

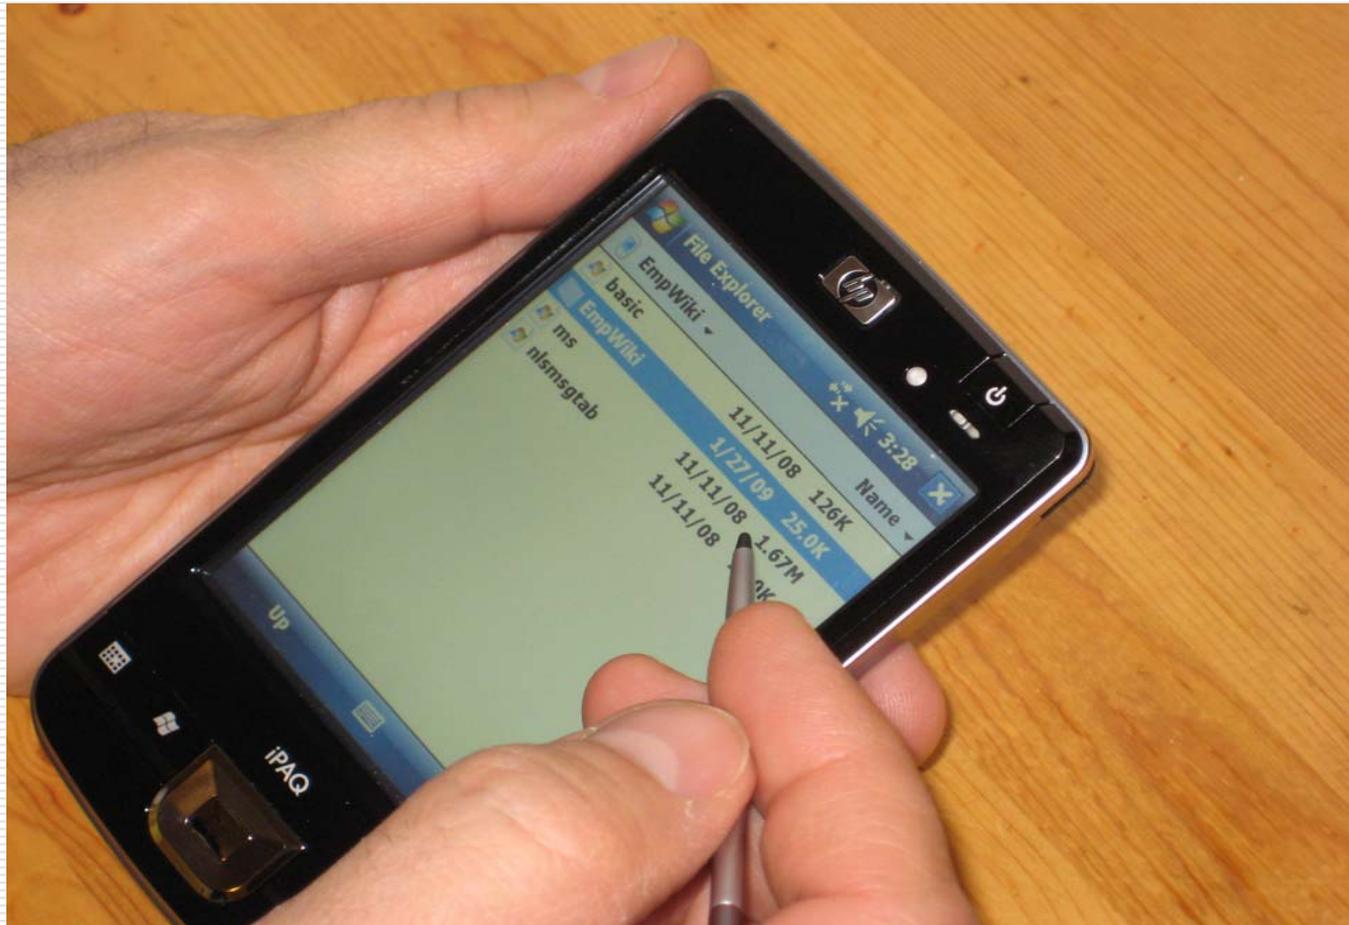

- *Search Wikipedia DB for titles having **Embedded** keyword:*

***SELECT id, title FROM pages WHERE title LIKE '%Embedded%'***

- *Without Empress Text Search Index:  
35.314 seconds with 131 **titles** in the result set.*
- *With Empress Text Search Index:  
0.077 seconds with 131 **titles** in the result set.*

- Compare to Wikipedia Search on Web

# Instead of Conclusion

---

- ***Empress*** brings new **retrieval** features to address the growing needs of embedded systems.

# Instead of Conclusion

---

- ***Empress*** is the perfect fit for those embedded systems that require handling **vast amount** of information and require retrieving it **fast**.
